Accounts Manager

OUR MISSION

Our mission is to be the packaging partner of maximum brands and give each one a unique shape. We also have a plan to help the globe in reducing plastic waste by setting up recycling collection and processing structure in coming years.

SERVICES

Arneja Packaging India follows a well-defined path in the process of development of a new product. This originates from the very first step of concept development till the mass production takes place for commercial use at the client's end. This systematic approach ensures adherence to the perceived product quality and launch schedule. Our capability to offer top-notch products in large quantities is bolstered primarily on our state of the art equipments and machinery. These machines are preserved in mint conditions with preventive maintenance by an adroit and proactive work force. Arneja offers 30,500 square feet of moulding area.

Offering you a range of more than 600 products.

Customisation is provided at every step.

Products of capacity ranging from 10ml to over 10L provided.

We follow hygiene guidelines at every step of production & transportation.

Products derived from PET, HDPE, PP, PPCP manufactured as per requirement.

OUR NEW PRODUCT DEVELOPMENT PROCESS

Understanding Customer Requirements & Drawings Development

Drawing & Cost Approval From Customer

3D Prototype Is Provided To Customer

Multi-cavity Mould Development & Sampling

Sample Trial At Customer's Line

Mass Production After Final Product Approval

MARKET SEGMENTS

Best solutions for various market segments.

FOOD PACKAGING

BEVERAGES PACKAGING

CAPS & CLOSURES

MILK & DAIRY PACKAGING

CAPABILITIES

CERTIFICATIONS

We have our own developed multiple checks & fms systems to guarantee the delivery of the quality that we are proud of. Our employees are trained regularly to to put their best foot forward hence improving the productivity and decreased cost which ensures our customers competitive packaging.

ISO 9001 Quality Management System

TECHNOLOGIES

Our maximum budget is allocated to machine and technology investment so that we get the best product and highest production ensuring that client enjoys the competitive price.

EXTRUSION BLOW MOULDING (EBM)

In extrusion blow moulding, the material is extruded into a parison. The parison is then clamped into a mould and blown into its final shape. A typical feature of packaging made using this technology is the welding seam at the base of the bottle.

Benefits: variety of designs (round, angular, oval, with handle), flexible production output

Products: bottles and packaging for cosmetics, household products, drinks, and food as well as oils and lubricants

Plastics used: HDPE, LDPE, PP, and extrudable PET.

INJECTION STRETCH BLOW MOULDING (ISBM) 2-STEP

Preforms are first produced in the injection-moulding process. In an independent, second step, known as stretch blow moulding, the preforms are reheated and stretch-blown to the final shape in the blow cavity. These bottles have a clearly distinguishable injection point at their base.

INJECTION MOULDING (IM)

Injection moulding is the high-pressure injection of the raw material into a mould, which shapes the polymer into the desired form.

Benefits: a virtually open choice of shapes and surfaces. • Products: individual, technical components and closures. • Plastics used: PP, PE, PS, etc.
